Dibya Ranjan Sahu

MOBILE-FIRST FULL-STACK ENGINEER | REACT NATIVE | REACT.JS | NODE.JS

+91-8144573052 | Bengaluru, KA | dibyaranjansahu8144@gmail.com | github.com | linkedin.com/in/dibyaranjan

PROFESSIONAL SUMMARY

Mobile-first Full-Stack Engineer with 3.5+ years of experience building and shipping **React Native (CLI and Expo)** apps to the App Store and Google Play, backed by **React.js, Next.js and Node.js** on the web and API side. Shipped an **offline-first, multi-locale enterprise field-service app live on Android and iOS** and independently delivered a **consumer credit-score fintech app live on Google Play** – Expo app, Hono/Bun API, Next.js admin, PostgreSQL, payments, DLT-compliant OTP and AWS deployment. Cut key feature load times from ~20–30 seconds to 3–5 seconds in the consumer app, and earlier resolved 40+ production issues on HR and pharmaceutical operations platforms. Strong in offline-first architecture, performance, secure authentication, automated testing (Maestro, Jest) and AI-assisted development (Claude, GPT, Cursor, Copilot). Seeking a mobile-first full-stack role with ownership of product features and architecture.

PROFESSIONAL EXPERIENCE

Qilin Lab – **Bengaluru** Jan 2026 – Present

Mobile-First Full-Stack Engineer – React Native, Node.js & Next.js

Project 1: Enterprise Asset Management (EAM) & Field Service Mobile App

Live on Google Play (Android) and the Apple App Store (iOS). Stack: *React Native CLI, TypeScript, Redux, OP-SQLite, Maestro. Scale: 16 feature modules, 128 screens.*

- **Eliminated data loss for technicians in low-connectivity plants and remote sites** by architecting an offline-first layer on OP-SQLite with a sync queue, repository pattern, network-state detection and automatic retry, so scans, inspections, fault reports and work-order updates sync on reconnect.
- **Cut asset lookup to a single scan and removed wrong-asset risk** by building a unified barcode / QR (camera) and RFID module feeding identical downstream flows, then extending it into 8 asset-lifecycle flows (assign, transfer, loan, retire, reinstate, dispose, tag, location details) on Redux with audit-ready compliance sighting.
- **Sped up first-time-fix and reduced senior escalations** by shipping AI-assisted fault investigation with guided troubleshooting, similar-case suggestions, autonomous resolution paths and a monitoring view with watch parameters, capturing tribal knowledge in a repeatable workflow.
- **Delivered a consistent UI across 128 screens and 4 locales (English, Bahasa Indonesia, Malay, Thai)** by designing modular boundaries, shared components, design tokens, light/dark theming and an automated CI check for missing translations that stopped missing strings and token drift from shipping.
- **Cut bug-reproduction time from minutes to seconds** by shipping in-app developer tooling in stage builds: a gesture-triggered network logger (requests, headers, latency) and a debug route jumper that opens any screen directly.
- **Significantly reduced E2E test-cycle time and caught regressions before merge** by codifying 14 Maestro E2E flows (5 iOS, 9 Android) with a one-command build-install-run loop, so every feature ships with a replayable acceptance test.

Project 2: Consumer Credit-Score Fintech App for the Indian Market (Solo, End-to-End)

Live on Google Play (Android). Stack: *React Native Expo, Hono on Bun, Next.js admin, PostgreSQL, Prisma, Better-Auth, Turborepo/Bun monorepo, Docker Compose, AWS EC2/RDS/S3, Nginx, Railway.*

- **Cut load time of key feature screens from ~20–30 seconds to 3–5 seconds (~85% faster)** by optimising how the mobile app loads and displays data, and reduced loading delays across the app on mobile.
- **Took a consumer fintech from zero to Play Store as the sole engineer** by delivering the Expo app, Hono/Bun API, Next.js admin and a domain-split Prisma schema in one monorepo on AWS EC2 (Nginx, RDS) with Railway staging, plus a zod-validated env package that fails at startup so misconfigured boots and client-side secret leaks are impossible.
- **Enabled regulator-compliant, one-tap OTP login** by integrating Better-Auth with a custom phone plugin on the ICS SMS gateway (TRAI DLT pe_id / template_id), Android autofill app-hash and a native Credential Manager phone-hint module, with a dev-only OTP bypass for testing.
- **Delivered personalised credit insights within seconds** by building a pipeline from the Kashti bureau API through XML parsing, normalised records and an S3 PDF to cached summary / action / risk-alert JSON with a concurrency guard; added English / Hindi AI explainer videos via TTS (OpenAI / ElevenLabs / Sarvam) delivered by webhook.
- **Prevented orphaned payments and wrong plan states** by implementing Cashfree one-time and subscription payments with dual verification (webhook plus client verifyAndActivate), a subscription webhook, a pending-payment admin view and atomic plan switching.
- **Restored the app to the Play Store after a Malware/Spyware policy flag** by removing all SMS permissions and libraries, unmounting the server-side message routes, documenting the rejection history and resubmitting.
- **Let non-engineers run the product day to day** by building a Next.js admin with isolated Better-Auth, analytics (usage, growth, churn), content CRUD, a push-notification composer, a bureau-sandbox report tester and AI-powered Hindi translation.

Cactus Communications May 2025 – Sep 2025

Full-Stack Developer (Frontend-Focused) – React.js, React Native (Expo) & Node.js (Contract)

- Built reusable React.js forms, tables and role-based dashboards for inventory, order and compliance workflows on a pharmaceutical operations platform (~70% frontend, ~30% backend), with the same features in the React Native (Expo) app.

- Developed Node.js / Express REST APIs with JWT authentication, role-based access control and optimised MongoDB aggregation pipelines for inventory, orders, batch tracking and audit logs.
- Integrated Redux Toolkit and Axios with robust loading, error and empty states, and delivered responsive, cross-browser-tested websites with HTML, CSS and Bootstrap.

Hyniva Simplify Enterprise – **Bengaluru** Aug 2024 – Apr 2025

Software Engineer – React & React Native

- Delivered a role-based HR Management System (React.js + MUI web, React Native + Expo mobile) with JWT authentication and REST API integration, implementing every web feature in the mobile app as well.
- Owned the Attendance, Leave and Performance modules with approval workflows, offline-first architecture, background sync and biometrics.
- Resolved 40+ production issues and improved performance using React.memo and Redux Toolkit patterns.

Abcedo Technologies – **Mumbai** Jun 2023 – Jul 2024

Web Developer – React & Node.js

- Built an E-Learning platform with React.js, TypeScript, Material-UI and Styled-Components, backed by Jest unit and integration tests.
- Developed secure Node.js / Express REST APIs on MongoDB with JWT authentication, Multer + Cloudinary media handling and aggregation pipelines.
- Added validation middleware, centralised error handling and optimised MongoDB queries for reliability under concurrent load.

TECHNICAL SKILLS

Mobile: React Native (CLI & Expo), Redux, Redux Toolkit, OP-SQLite (offline-first), Maestro (E2E), Xcode, iOS App Store & Google Play publishing

Web: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML, CSS, Material-UI, Tailwind CSS, Bootstrap, Styled-Components

Backend: Node.js, Express.js, Hono / Bun, REST APIs, JWT, Better-Auth, Zod, Webhooks, Axios

Databases: PostgreSQL, Prisma, MongoDB (CRUD & Aggregations), Mongoose, SQL

Cloud / DevOps: AWS (EC2, RDS, S3), Docker Compose, Nginx, Railway, Turborepo / Bun monorepos

Integrations: Cashfree, Razorpay, OpenAI / ElevenLabs / Sarvam TTS, Anthropic API, Google Gemini, Cloudinary

AI Tools: Claude, GPT, Cursor, Copilot

Testing / Tools: Jest, i18n CI checks, Git, GitHub, Jira, Postman, Swagger

KEY ACHIEVEMENTS

- **~85% faster feature loading:** cut key feature screens in a consumer fintech mobile app from ~20–30 seconds to 3–5 seconds.
- **2 production apps live in stores:** an enterprise field-service app on Android and iOS, and a consumer credit-score app on Google Play built solo, end-to-end.
- **Offline-first at scale:** 16 feature modules and 128 screens in 4 locales, plus 8 asset-lifecycle flows.
- **Full ownership:** one engineer across mobile, API, admin dashboard, payments (Cashfree), DLT-compliant OTP, AWS deployment and Play Store release.
- **Quality and reliability:** automated Maestro E2E tests on iOS and Android with a significantly shorter test cycle, and 40+ production issues resolved at a previous role.

PERSONAL PROJECTS

- **AI Presentation Generator:** Live Next.js 14 app using Google Gemini 2.5 Flash that converts natural-language prompts into downloadable PowerPoint (.pptx) files with structured slides; deployed on Vercel.
- **Video Streaming Platform:** Node.js + Express.js + MongoDB backend with JWT authentication, CRUD, aggregation pipelines for recommendations, Multer + Cloudinary uploads and scalable streaming support.
- **Weather & News Aggregator:** Cross-platform React Native (Expo) app with real-time forecasts, geolocation and news feeds (OpenWeatherMap + NewsAPI), native modules for GPS/notifications and performance optimisations.

CERTIFICATION

MERN Full Stack Development Course – JS Spider Sep 2022 – May 2023

EDUCATION

B.Sc. Chemistry – Utkal University **(CGPA: 7.9)** Aug 2019 – Aug 2022
